

SUMMARY

Software Engineer with hands-on experience building scalable full-stack applications, enterprise HRMS platforms, and real-time trading systems. Skilled in JavaScript, React, Node.js, Python, PostgreSQL, REST APIs, and AI-powered automation. Experienced in designing secure authentication systems, performance optimization, API development, and delivering production-quality software using AI-assisted development tools.

WORK EXPERIENCE

Software Developer | YoForex

Apr 2026 – Present

- Developed production-grade full-stack web applications using JavaScript (Node.js), PostgreSQL, and REST APIs.
- Engineered EmpTrakr, a production-ready HRMS platform for employee management, attendance tracking, leave management, role-based access control (RBAC), and administrative dashboards.
- Designed and implemented secure authentication systems with JWT Authentication, OAuth, and RBAC.
- Developed Blog Forge, an AI-powered SEO, AEO, and GEO-friendly blog generator for websites that creates high-quality, optimized blogs automatically.
- Implemented multi-site blog publishing, OAuth authentication, and secure user management.
- Integrated multiple AI providers including OpenAI and Claude through a unified AI gateway.
- Built research pipelines using Exa and Tavily to enhance content accuracy and relevance.
- Designed and implemented multi-instance architecture enabling multiple blog generations simultaneously across tabs, users, and different machines.
- Improved application performance through API optimization and production bug fixes.
- Built all projects with the help of AI tools and vibe coding techniques, following best practices and real-world development standards.
- Collaborated with the development team to build, maintain, and deploy scalable production software.

RTX5 Trading Terminal (Trading Platform like MT5) – Frontend & Backend

- Worked on RTX5, a multi-asset trading platform similar to MT5, contributing to both frontend and backend development.
- Developed real-time trading features including live market data, interactive charts, order management, positions, deals, and account management.
- Implemented WebSocket-based real-time data streaming for live market updates and order execution.
- Engineered REST APIs for trading operations, authentication (JWT), and business logic.
- Built responsive trading interfaces using React for web and desktop terminal.
- Optimized application performance for low-latency, high-throughput trading workloads.
- Collaborated with the team to build and deploy a scalable, secure, production-ready trading platform.

PROJECTS

1. Blog Forge – AI-Powered SEO, AEO & GEO Blog Generator for Websites

React, Node.js, PostgreSQL, REST APIs, OpenAI API, Claude API

- Built an AI-powered blog generator that creates SEO, AEO, and GEO-friendly, high-quality blogs for websites.
- Automates research, content generation, optimization, and publishing across multiple connected CMS platforms.
- Integrated Exa AI and Tavily AI for web research and multiple LLMs (Claude, OpenAI, Grok, Gemini, Kimi) via an AI gateway with model routing and fallback.
- Developed multi-instance, queue-based architecture with autopilot pipeline, human review workflow, and automated quality gates.
- Integrated Google Search Console and GA4 for performance tracking.

 Result: Increased organic website traffic by ~30% for connected websites through high-quality, SEO/AEO/GEO-optimized AI-generated content.

2. EmpTrakr – HRMS Platform

Electron, Node.js, REST APIs, PostgreSQL

- Developed a complete HRMS platform for managing employees, attendance, leaves, and workforce data.
- Implemented role-based access control for employees, managers, and admins.
- Built features for attendance tracking, leave approval workflow, employee lifecycle management, and dashboards.
- Designed modular REST APIs and optimized database queries for efficient data handling.

 Result: Successfully onboarded 300+ companies to the platform for their HR operations.

3. Full-Stack Music Streaming Platform (Personal Project)

React, Node.js, Express.js, MongoDB, JWT, REST APIs

- Built a full-stack music streaming platform with secure JWT authentication for users and artists.
- Developed REST APIs for user management, playlist operations, and music streaming.
- Implemented playlist management, artist dashboard, and dynamic content handling.
- Integrated MongoDB for scalable and efficient data storage.

EDUCATION

B.Tech – Electronics and Communication Engineering
Techno International New Town | Board–MAKAUT | 2025

12th–Science
Gobindapur Ratneshwar High School | Board–WBCHSE | 2021

10th–General
Madarat Popular Academy | Board–WBBSE | 2019

TECHNICAL SKILLS

Languages	: JavaScript, Python
Frontend	: HTML5, CSS3, React
Backend	: Node.js, Express.js, REST APIs
Databases	: PostgreSQL, MongoDB
AI & APIs	: OpenAI API, Claude API
Tools	: Git, GitHub, VS Code
